Below are cumulative indexes for issues in Volume 23 (2007). Entries show Volume and Issue Number page numbers. For example, the reference for “Safe design, construction industry” is to pages 89–99 of Issue 1 of Volume 23.

Please note that the following indexes are to be found within the main subject index: Videos/Software Reviewed Indexes, Publications Reviewed Index, Who’s Who Index. The Author Index, however, remains a separate index located at the end of the main index.

Absenteeism
  correctional officers, occupational stress ......................23(1)43-52
  work-related stress (UK) ......................23(4)373-381

Accidents
  road incidents and occupational
driver stress ..................................23(5)459-468

Acid mist
  zinc plant operators, effects
  on lung function ............................23(3)267-277

Adhesives
  vinyl-backed carpets,
  indoor air quality ..........................23(3)241-250

Adolescent workers — see Young workers

Airborne contaminants
  adhesives in vinyl-backed
carpet sı ..................................23(3)241-250
  shearing shed dust and
  bioaerosols ................................23(3)219-224

Animal handling
  shearing shed dust and
  bioaerosols ..................................23(3)219-224

Asbestos
  history of disease recognition
  and control ..................................23(6)519-530

Asthma
  farmers’ knowledge of risks and
  prevention (NZ) ..............................23(5)469-479

Attitudes
  undergraduate students, laboratory
  safety training (Hong Kong) ...........23(2)187-194

Back pain
  electroconvulsive therapy
  suite staff ..................................23(2)161-163

Best practice
  nanotechnology industry ....................23(4)315-331

Bioaerosols
  shearing shed dust
  comparison ..................................23(3)219-224

BP oil refinery, Texas City
  safety culture and management ..............23(1)3-6

Building industry — see Construction industry

Bullying at work
  health care workers ..........................23(2)153-160
  “psychopaths” and inappropriate
  workplace behaviour ......................23(5)403-406
  young workers and initiation
  rites ........................................23(4)333-341

Canada
  workers compensation,
  accuracy of injury coding ..............23(4)349-355

Carpets
  adhesives, indoor air quality ............23(3)241-250

Casual employment
  fixed-term employment (Finland) ..23(6)539-556

Chemical assessment
  nanotechnology industry .................23(4)315-331

Chemicals
  pesticides, organophosphate ..........23(2)133-142

J Occup Health Safety — Aust NZ 2007, 23(6) 571
## Index

**Clinical gloves**
- design and manufacture failure...23(3)251-258

**Cognitive impairment**
- exposure to organophosphate pesticides .................................23(2)133-142

**Community-based medicine**
- occupational physicians .............................................23(6)531-537

**Compliance**
- deterrence and risk-based OHS law ....................................23(5)433-444

**Computers**
- manual and computer-assisted risk assessment .........................23(4)357-372

**Construction industry**
- improving OHS standards, safe design ..............................23(1)89-99
- safety culture, subcontractors in domestic housing (NSW) ..........23(2)143-152

**Control measures**
- nanotechnology industry ..............................................23(4)315-331

**Correctional officers**
- predictors of WorkCover stress claims ...............................23(1)43-52

**Court cases**
- aluminium smelter, worker trapped in conveyor .......................23(3)214
- ammonia gas fatality ..............................................23(3)216
- apprentice, thumb guillotined ........................................23(2)128
- assaults on school cleaners ...........................................23(2)124-126, 126-127
- boy driving forklift, accident ......................................23(4)311
- burnt by pressure cooker steam ......................................23(3)218
- child injured on building site ........................................23(6)513
- concrete truck driver dragged into turning barrel ....................23(3)217-218
- convictions, fatal fall of 16-year-old ..................................23(4)303-304; 23(5)417-418
- crane topped, excessive load ..........................................23(3)214-215
- electrocution
  - 13-year-old at hotel pool ...........................................23(5)418-419
  - welding in damp clothes ...........................................23(4)306-307
  - explosions
    - compressed natural gas system ..................................23(5)416-417
    - drum cut with oxy torch .........................................23(4)309-310
    - molten copper ....................................................23(1)15
    - truck tyre during inflation ......................................23(4)310-311
    - welding, fuel storage tank ......................................23(3)216-217
- fall at construction site, paraplegia ..................................23(6)513-514
- fall down 10 steps, courier ...........................................23(6)514-515
- fall from monorail platform ..........................................23(6)510-511
- fatalities
  - ammonia gas ..........................................................23(3)216
  - boy electrocuted at hotel pool .....................................23(5)418-419
  - conveyor, aluminium smelter .......................................23(3)214
  - cutting oil drum with plasma torch ...............................23(1)17
  - electrocution while welding .......................................23(4)306-307
  - fall of 16-year-old, convictions ....................................23(4)303-304; 23(5)417-418
  - falling fibreboard sheets ..........................................23(2)124
  - load falls from crane ...............................................23(1)18
  - mechanic killed in workshop ......................................23(6)512-513
  - pressure testing of pipeline ......................................23(2)123
  - roof construction ..................................................23(4)308-309
  - shunter run over by wagon .........................................23(4)307-308
  - soldier, heat stress ................................................23(4)304-306
  - Waterfall train derailment ........................................23(6)509-510
  - fire brigade’s OHS breaches ........................................23(5)414-415
  - forklift accident ...................................................23(4)311
  - formwork falls onto car in street ..................................23(4)311-312
  - furniture removal, unsafe ..........................................23(3)215-216
  - hand injuries
    - gloved hand pulled into machine .................................23(2)128-129
    - hand blown off during “bunny bombing” .........................23(5)415-416
    - thumb broken in moulding machine ...............................23(5)419
    - thumb guillotined ..................................................23(2)128
    - unguarded machine ................................................23(1)20
    - machine guarding accident .......................................23(1)20
    - mechanic killed by tractor in workshop ..........................23(6)512-513
    - monorail operator, fall ............................................23(6)510-511
    - pipeline pressure testing fatality ................................23(2)123
    - police officers, PTSD training .................................23(2)129-130
    - post-traumatic stress disorder, police officer training ........23(2)129-130
    - principal, failure to control contractor’s system .........23(6)516-517
    - psychiatric injury from hold-up ................................23(2)130-131
    - Redfern Riot, PPE and training failures ........................23(5)413-414
road worker run over, reversing truck .................. 23(1) 16-17
roof worker fatalities .................................. 23(4) 303-304, 308-309;
shunter run over by wagon .................. 23(4) 307-308
soldier, death from heat stress .................. 23(4) 304-306
storeman splashed with sodium hypochlorite .................. 23(4) 308
Toluene used as paint stripper in tank .................. 23(6) 511-512
train derailment, Waterfall .................. 23(6) 509-510
tansom falls from scaffolding .................. 23(1) 19-20
tree-planting volunteer fractured ankle .................. 23(6) 515-516
truck tyre explodes during inflation .................. 23(4) 310-311
unsafe furniture removal .................. 23(3) 215-216
unsafe traffic management .................. 23(1) 15-16
Waterfall train derailment .................. 23(6) 509-510
welding, fuel storage explosion .................. 23(3) 216-217

Custodial centres
stress claims by correctional officers .................. 23(1) 43-52

Data systems
disease surveillance systems .................. 23(6) 557-562

Databases
comparing manual and computer-assisted risk assessment .................. 23(4) 357-372
hazard exposure surveillance .................. 23(6) 563-570

Deafness — see Hearing loss

Dehydration
outdoor workers in north-west Australia .................. 23(1) 79-87

Dermatitis
nurses, Japan .................. 23(1) 53-67

Design — see Workplace design

Deterrence — see Penalties

Diagnosis
injury coding, workers compensation (Canada) .................. 23(4) 349-355

Disease surveillance systems
occupational disease data .................. 23(6) 557-562

Diseases — see also Occupational diseases occupational disease in the modern world .................. 23(6) 499-501
tattoo operators, infection control (Qld) .................. 23(3) 225-231

Driver behaviours
risk ratings by train drivers, level crossings .................. 23(5) 445-450

Driver stress
influence on work-related road safety .................. 23(5) 459-468

Drivers — see Motorists

Early screening
community-based occupational medicine .................. 23(6) 531-537

Editorials
occupational disease in the modern world .................. 23(6) 499-501
occupational hygiene in Australia .................. 23(3) 203-207

safety culture and safety management .................. 23(1) 3-6
systematic OHS management: what makes it work? .................. 23(4) 291-294
the problem with “workplace psychopaths” .................. 23(5) 403-406

workers compensation, workplace health and safety, and the “new” federalism .................. 23(2) 107-111

Education and training
laboratory safety, knowledge and attitudes of undergraduate students (Hong Kong) .................. 23(2) 187-194
OHS experiences and perceptions of Australian university students .................. 23(3) 259-265
OHS training (Finland) .................. 23(4) 383-389
tattoo operators (Qld) .................. 23(3) 225-231

Electroconvulsive therapy suite staff
lifting or moving injuries .................. 23(2) 161-163

Emotional trauma
health care workers .................. 23(2) 153-160

Employment contracts
fixed-term (Finland) .................. 23(6) 539-556

Engineering controls
nanotechnology industry .................. 23(4) 315-331

Entertainment venues
noise exposure (WA) .................. 23(1) 69-78
European Network of Safety and Health Practitioner Organisations
OHS professionals in Singapore ...............................................23(1)23-41

Explosions
Texas City BP oil refinery ..........................................................23(1)3-6

Exposure
hazard exposure surveillance .................................................23(6)563-570
— action levels ........................................................................23(4)343-348
— entertainment venues (WA) .................................................23(1)69-78
— occupational ........................................................................23(2)165-177
organophosphate pesticides ......................................................23(2)133-142

Exposure evaluation
nanotechnology industry .............................................................23(4)315-331
sulphuric acid mist, zinc plant operators ..................................23(3)267-277

Exposure standards
ageing workforce and occupational hygiene ................................23(3)233-239

Farm safety
occupational respiratory disease survey (NZ) ..........................23(5)469-479

Fatigue
outdoor workers, north-west Australia ......................................23(1)79-87

Film, television and video industry
confidential incident reporting (Qld) .........................................23(5)451-458

Finland
fixed-term employment ..............................................................23(6)539-556
OHS training, education system ..............................................23(4)383-389

Fixed-term employment
Finland ......................................................................................23(6)539-556

Furniture manufacturing
manual and computer-assisted risk assessment ..........................23(4)357-372

Gender differences
OHS experiences and perceptions of Australian university students ..................................................................................23(3)259-265

Gloves
design and manufacture failure ................................................23(3)251-258

Gretley mine disaster
deterrence and risk-based OHS law ........................................23(5)433-444

Hand dermatitis
nurses, Japan .............................................................................23(1)53-67

Hazard exposure surveillance
occupational disease data .........................................................23(6)563-570

Health care workers
workplace violence risk ..............................................................23(2)153-160

Health screening
community-based occupational medicine .................................23(6)531-537

Health surveillance
ageing workforce .......................................................................23(3)233-239
occupational disease data ..........................................................23(6)557-562

Hearing conservation
occupational noise exposure ......................................................23(2)165-177

Hearing loss
entertainment venues (WA) ......................................................23(1)69-78
occupational noise exposure and action levels ..........................23(4)343-348
reduction of noise exposure ......................................................23(2)165-177

Heat stress
outdoor workers, north-west Australia ......................................23(1)79-87

Hierarchy of controls
nanotechnology industry .............................................................23(4)315-331

Hierarchy of risk
risk ratings by train drivers, illegal motorist behaviours at level crossings .................................................................23(5)445-450

Historical background
occupational disease recognition and control ............................23(6)519-530

Hong Kong
laboratory safety training, knowledge and attitudes of undergraduate students ..........................................................23(2)187-194

Hours of work
fixed-term employment (Finland) ..............................................23(6)539-556

Hydration
outdoor workers, north-west Australia ......................................23(1)79-87

Incident reporting
film, television and video industry (Qld) ......................................23(5)451-458

Indoor air quality
adhesives in vinyl-backed carpets ............................................23(3)241-250

Industrial gloves
  design and manufacture failure  ...........................................23(3) 251-258

Infection control
  tattoo operators (Qld) .......................................................23(3) 225-231

Information dissemination
  occupational noise exposure ......23(2) 165-177

Initiation rites
  young workers  .................................................................23(4) 333-341

Injuries
  diagnostic codes, workers compensation (Canada) .....................23(4) 349-355

Injury coding
  workers compensation (Canada) ............................................23(4) 349-355

Injury prevention
  thoroughbred horseracing industry (Vic) ..................................23(5) 421-431

International studies
  fixed-term employment (Finland) .........................................23(6) 539-556
  OHS professionals in Singapore ..................................23(1) 23-41

Japan
  nurses, OHS issues .........................................................23(1) 53-67

Jockeys
  thoroughbred horseracing industry, safety (Vic) .......................23(5) 421-431

Knowledge base
  undergraduate students, laboratory safety training (Hong Kong) ....23(2) 187-194

Laboratory safety
  training, knowledge and attitudes of undergraduate students (Hong Kong) .........................................................23(2) 187-194

Legislation discussed
  Queensland tattoo operators ....23(3) 225-231
  updates ..................23(1) 21-22; 23(4) 313-314

Level crossings
  risk ratings by train drivers, illegal motorist behaviours ..............23(5) 445-450

Lifting — see Manual handling

Lung cancer
  history of disease recognition and control .........................23(6) 519-530

Lung function testing
  zinc plant operators, sulphuric acid mist ..............................23(3) 267-277

Management
  occupational noise exposure ......23(2) 165-177
  Texas City BP oil refinery .............................................23(1) 3-6

Management systems
  film, television and video industry, incident reporting ................23(5) 451-458
  gloves ........................................................................23(3) 251-258
  what makes them work? ..................................................23(4) 291-294

Manual handling
  electroconvulsive therapy suite staff ....................................23(2) 161-163

Memory/mood disorders — see Cognitive impairment

Mesothelioma
  history of disease recognition and control ................................23(6) 519-530

Mining industry
  deterrence and risk-based OHS law ......................................23(5) 433-444
  history of occupational disease ...........................................23(6) 519-530

Mobbing
  young workers and initiation rites ........................................23(4) 333-341

Motorists
  behaviour at level crossings, risk ratings by train drivers ..........23(5) 445-450

Musculoskeletal complaints
  electroconvulsive therapy suite staff ....................................23(2) 161-163
  nurses, Japan .................................................................23(1) 53-67

Music entertainment venues
  noise exposure (WA) .........................................................23(1) 69-78

Nanotechnology industry
  best practice ................................................................23(4) 315-331

National uniformity
  workers compensation and workplace health ..........................23(2) 107-111

Needlestick injuries
  nurses, Japan .................................................................23(1) 53-67
Neuropsychological dysfunction
exposure to organophosphate pesticides .................................................. 23(2) 133-142

New Zealand
farmers’ knowledge of occupational respiratory disease ..................... 23(5) 469-479

“No No lift” policies
electroconvulsive therapy suite staff .............................................................. 23(2) 161-163

Noise
action levels for noise exposure ................................................................. 23(4) 343-348
entertainment venues (WA) reducing exposure ........................................... 23(2) 165-177

Nurses
OHS issues, Japan ......................................................................................... 23(1) 53-67

Occupational asthma — see Asthma

Occupational diseases
community-based physicians ................................................................. 23(6) 531-537
fixed-term employment (Finland) ................................................................. 23(6) 539-556
hazard exposure surveillance ................................................................. 23(6) 563-570
history of disease recognition and control .................................................. 23(6) 519-530
occupational disease in the modern world ................................................ 23(6) 499-501
surveillance systems and disease data ..................................................... 23(6) 557-562

Occupational health and safety
ageing workforce ......................................................................................... 23(3) 233-239
domestic housing industry safety culture (NSW) ........................................ 23(2) 143-152
experiences and perceptions of Australian university students .................. 23(3) 259-265
Finland, OHS training in education system ................................................. 23(4) 383-389
Japan, nurses ............................................................................................... 23(1) 53-67
management systems, what makes them work? ......................................... 23(4) 291-294
Singapore ..................................................................................................... 23(1) 23-41

Occupational hygiene
ageing workforce ......................................................................................... 23(3) 233-239
compounds in carpet adhesives ................................................................. 23(3) 241-250
OHS experiences and perceptions of Australian university students ....... 23(3) 259-265
overview ...................................................................................................... 23(3) 203-207
shearing shed dust and bioaerosols .............................................................. 23(3) 19-224
sulphuric acid mist exposure, zinc plant operators ..................................... 23(3) 267-277
tattoo operators (Qld) .................................................................................. 23(3) 225-231

Occupational noise — see Noise

Occupational physicians
community-based medicine ........................................................................ 23(6) 531-537

Occupational stress
influence on work-related road safety .......................................................... 23(5) 459-468

Occupational violence
young workers and initiation rites ............................................................... 23(4) 333-341

OHS professionals
Singapore ....................................................................................................... 23(1) 23-41

Organophosphates
cognitive impairment following exposure to pesticides ......................... 23(2) 133-142

Outdoor workers
hydration, north-west Australia ................................................................. 23(1) 79-87

Partner disruption
shiftworkers on eight- and 12-hour shifts .................................................... 23(2) 179-185

Penalties
deterrence and risk-based OHS law .......................................................... 23(5) 433-444

Personal protective equipment
ageing workforce ......................................................................................... 23(3) 233-239
glove failure ............................................................................................... 23(3) 251-258
nanotechnology industry ............................................................................. 23(4) 315-331

Practical jokes and pranks
young workers and initiation rites ............................................................... 23(4) 333-341

Preventive strategies
community-based occupational medicine .................................................... 23(6) 531-537
disease surveillance systems ........................................................................ 23(6) 557-562
health care workers, workplace violence ................................................... 23(2) 153-160
occupational noise exposure ...................................................................... 23(2) 165-177

Prison officers — see Correctional officers

Are you wrestling with your contractor obligations?

With the commencement of the Independent Contractors Act (Cth) on 1 March 2007, managers need to know their legal responsibilities when engaging contractors.

Written by IR authority and practitioner Professor Andrew Stewart of Piper Alderman, this book will help you:

✓ receive an overview of the Independent Contractors Act
✓ understand the practical implications of the new laws and how they relate to the workplace relations reforms
✓ learn about the way independent contracting arrangements are affected by the common law, by industrial awards and agreements, and by legislation on matters such as workplace safety, trade practices, discrimination and tax.

Understanding Independent Contractors is for lawyers, HR and OHS managers, accountants and anyone else dealing with contractors and their employment-related issues.

CCH Code: 34095A  RRP: $49.95 (incl. GST)

Order your copy now by calling CCH on 1300 300 224 or visit www.cch.com.au

CCH – The Professional’s First Choice.
NOTES FOR CONTRIBUTORS

Contributions are always welcome. News, letters and articles should be sent to:

Managing Editor
The Journal of Occupational Health and Safety
GPO Box 4072
Sydney, NSW 2001 OR
Email: dpowell@cch.com.au

Contributions can be discussed with the Managing Editor at CCH Australia Limited (contact (02) 9857 1845).

New Zealand contributors should note that material for the journal may be sent to:

CCH New Zealand Limited
24 The Warehouse Way
Northcote, Auckland 10
marked for forwarding to CCH Australia Limited.

Articles with original material are accepted for consideration with the understanding that, except for abstracts, no part of the data has been published, or will be submitted for publication elsewhere, before appearing in this journal. Authors are required to assign copyright to CCH Australia Limited when their article is accepted for publication.

INSTRUCTIONS TO CONTRIBUTORS

Articles should be about 3,500 words (longer articles will be considered) and carry an abstract of not more than 150 words, stating the key points of the material. Please supply five keywords and brief details of the author’s professional qualifications, current position and employer.

OHS in brief articles are short reports of about 2,000 words.

Letters should not exceed 300 words.

Conferences/seminars/courses. Details supplied for publication should include date, venue, contact details and a list of the main topics.

PREPARATION OF MANUSCRIPTS

Manuscripts should be written in concise language and should be typed double spaced, using only one side of the paper. Number pages consecutively and leave wide margins. A separate title page should contain the title, the author’s full name and qualifications, and details relevant to correspondence. If possible, include a word count.

Authors should submit one original and two copies of each manuscript. It is good practice for the author to retain his/her own copy of the manuscript. Articles will be submitted for expert peer review (with authors and referees remaining anonymous).

On acceptance of the article, authors will be asked to provide the manuscript electronically via email (dpowell@cch.com.au) or on a floppy disk.

Figures, tables and graphs. All figures (line drawings, graphs, charts, diagrams, photographs) should be suitable for easy reproduction. Photographs should be submitted as glossy black and white prints. Type legends in double spacing on separate pages. To assist anonymous editorial review, do not indicate author names on figures.

Statistical data should be expressed in SI units.

References should be cited in the text by superior numbers and a full list of references given at the end of the manuscript in numerical sequence (based on the Vancouver system). References to books should include authors’ surnames and initials, full title, place of publication, full name of publisher and date of publication. References to journal articles should include authors’ surnames and initials, full title of article, full title of journal, date of publication, volume number, issue number and page span.

The accuracy of references is the author’s responsibility. Check each reference in the manuscript and again in the proofs.

Authors are responsible for ensuring that their words do not infringe copyright.

House style. Manuscripts will be edited following CCH house style. These changes will be at the discretion of the publisher.

Alterations to proofs. The only acceptable changes at this stage of production are to correct misprints or errors of fact. Major alterations of wording or the addition of new material cannot be accepted at proof stage. Any queries written in the margins of proofs need to be answered. Page proofs must be returned promptly.

Detailed Instructions for Authors may be downloaded from www.cch.com.au/journalohs
